Bright Coffee Shop Performance & Growth Strategy

Comprehensive Sales Analysis & Operational Recommendations (Jan - Jun 2023)

Executive Briefing Document

Total Revenue: R 698.81K | **Total Units Sold: 149.12K**

The Evening Traffic Gap

Morning drives massive volume, but evening Average Order Value (AOV) remains nearly identical. The bottleneck is foot traffic, not customer willingness to spend.

Location Parity

Hell's Kitchen, Astoria, and Lower Manhattan perform at near-identical levels. Operational Operational formulas are successfully scaling without local decay.

Product Imbalance

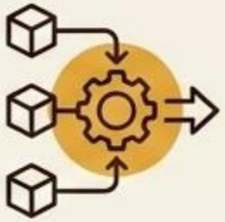
Core beverages (Coffee/Tea) drive 95%+ of unit volume. High-margin supplementary categories (Branded, Packaged Chocolate) require aggressive inventory optimization.

Step 1: Source Ingestion

Raw daily transactional data imported via Excel/CSV formats.

Step 2: Databricks Transformation (ETL)

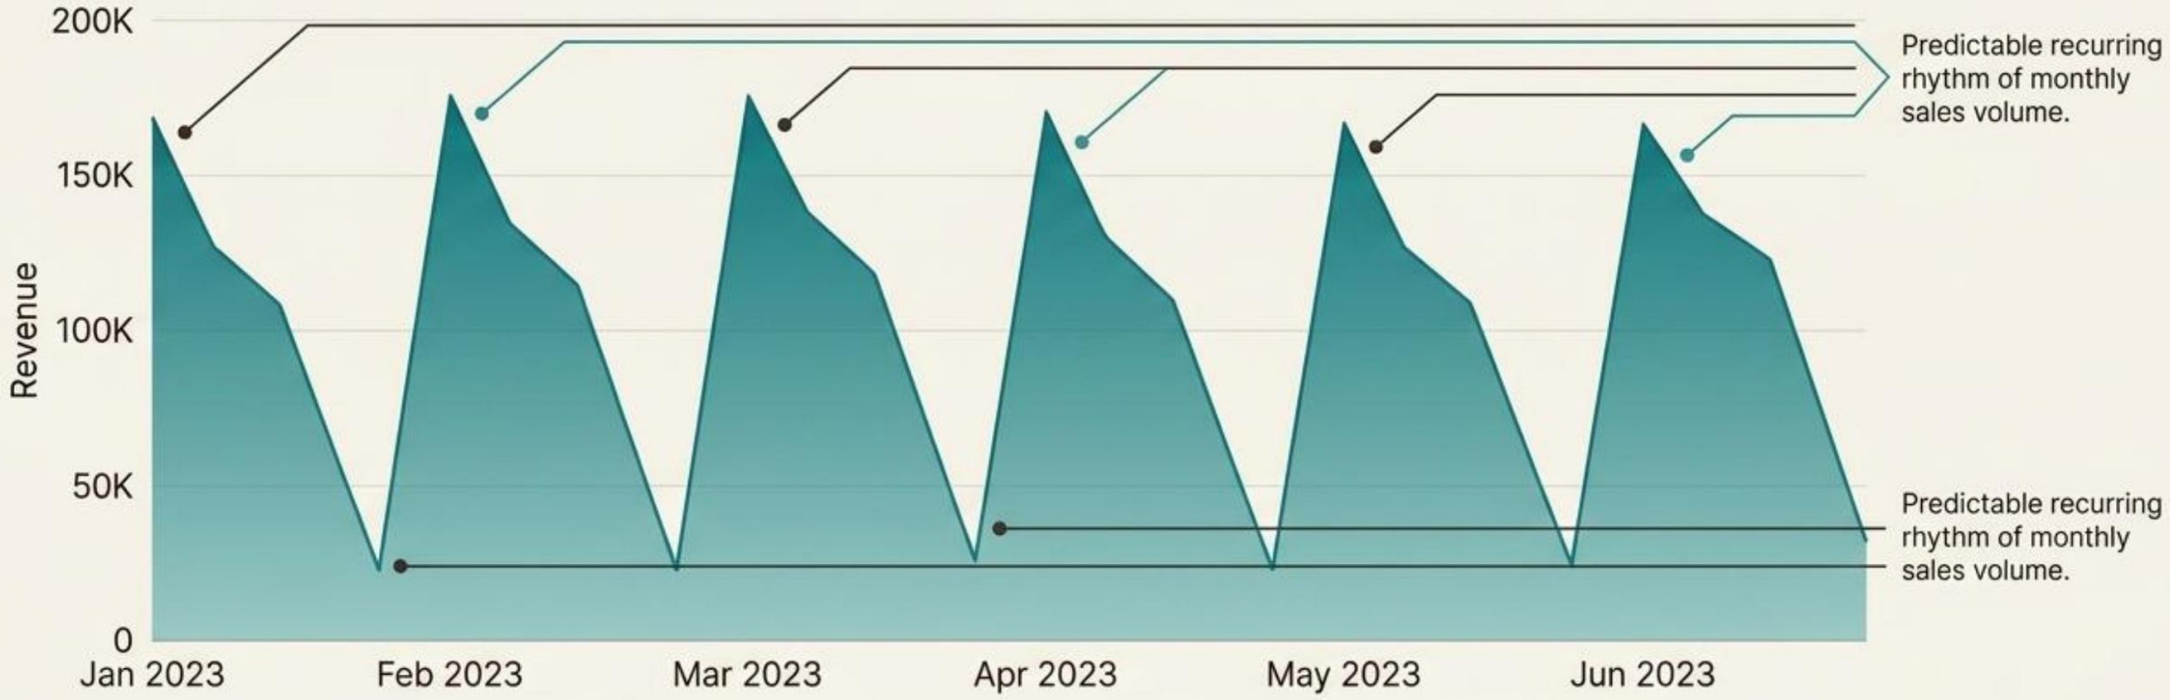
- Unit price casting (standardizing comma/decimal anomalies)
- Automated total_amount calculations (unit_price * transaction_qty)
- Granular grouping via transaction_time_bucket for 30-minute operational intervals



Step 3: Executive Presentation

Final processed tables exported to advanced BI tools (Tableau/Power BI) for strategic visualization.

First Half 2023 Monthly Revenue Cycles



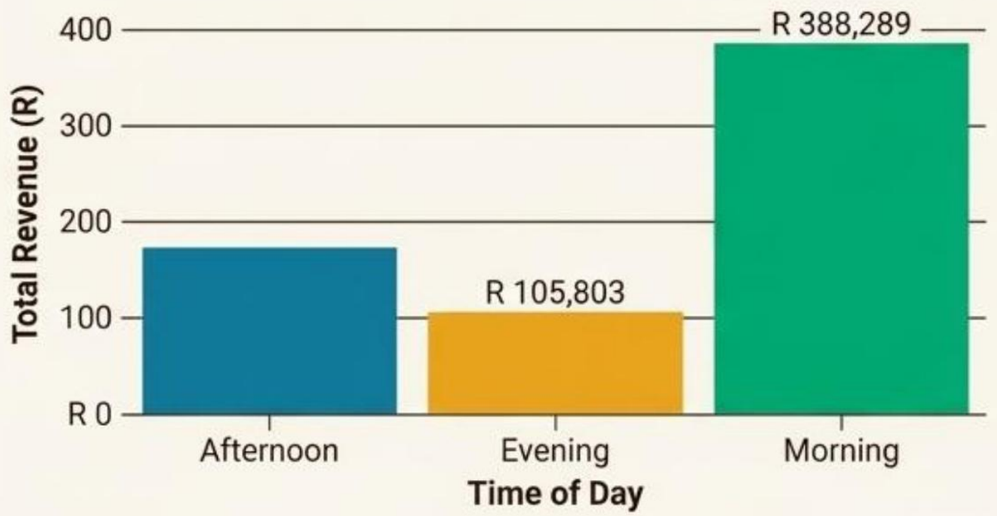
Takeaway Box

Consistent monthly cyclicality indicates stable baseline demand, allowing management to confidently forecast inventory requirements and time marketing interventions.

Volume vs. Value: Time of Day Analysis

KPI Ticker: | Daily Revenue: R 494,092 | Total Orders: 1,285 | AOV: R 384.50

Total Revenue by Time of Day (Volume)



Average Order Value (AOV) (Value)

Customers who visit in the evening spend exactly as much per order as the morning rush. The R 282K revenue gap is purely a function of missing foot traffic.

Portfolio Consistency Across Diverse Neighborhoods

KPI Ticker — Daily Revenue: R 494,092 | Total Orders: 1,285 | AOV: R 384.50

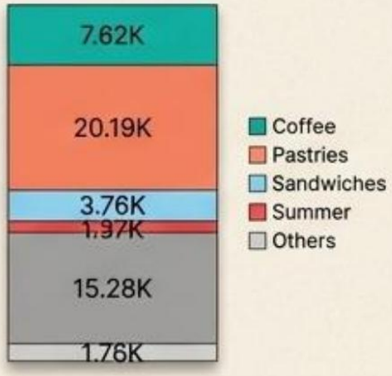
Hell's Kitchen

1. Total Orders

50.74K

Total Orders

2. Category Mix



Astoria

1. Total Orders

50.6K

Total Orders

2. Category Mix

Lower Manhattan

1. Total Orders

47.78K

Total Orders

2. Category Mix

Remarkable operational consistency. Variations in total order volume across the three locations are statistically negligible, indicating the core Bright Coffee Shop model is highly resilient and location-agnostic.

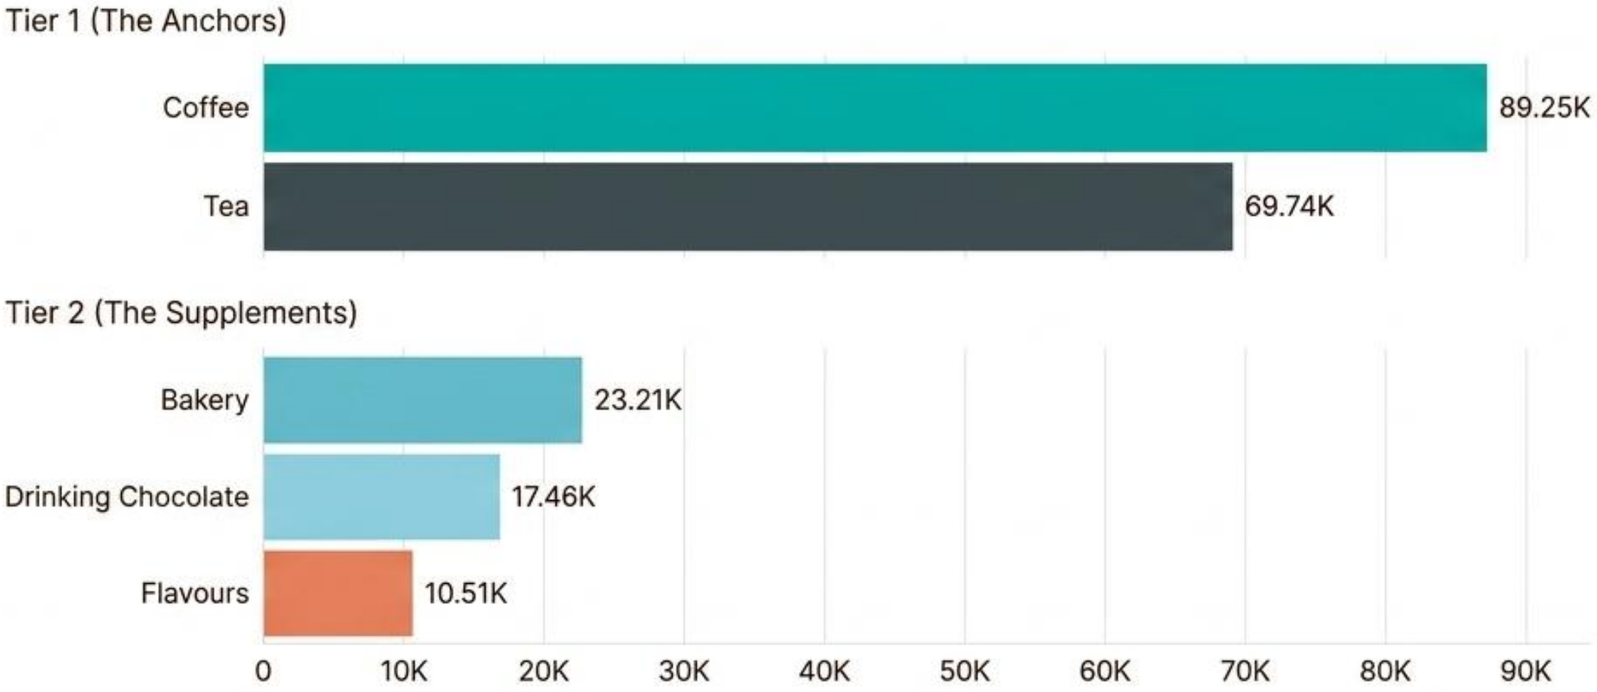
Total Units Sold by Category



Sidebar Insight

Key Insight

Coffee and Tea account for the vast majority of our 149K total units.

Secondary items are currently riding the coattails of beverage purchases rather than driving independent traffic.

The Roasters Dashboard

The Hero SKUs: Top 5 Performers

KPI Ticker: Daily Revenue: R 494,092 | Total Orders: 1,285 | AOV: R 384.50

Dark chocolate Lg

Earl Grey Rg

Latte

Morning Sunrise Chai Rg

Peppermint Rg

These 5 specific items form the **backbone** of our daily **revenue generation**.
Inventory levels for their raw ingredients must be guaranteed as 'zero-fail' operational priorities.

Underperformers & Shelf-Space Opportunity Costs

KPI Ticker: Daily Revenue: R 494,092 | Total Orders: 1,285 | AOV: R 384.50

Opportunity Matrix

Packaged Chocolate	Branded Goods	Loose Tea
487 total units ↘	**776 total units** ⚠	**1.21K units** ⚠

These categories represent less than 1.5% of total volume combined. They are consuming valuable physical shelf space and inventory capital.

Should we discount to clear, repackage as high-ticket gift items, or sunset these lines entirely to expand our high-performing Bakery section?

The Revenue Growth Matrix

Store Traffic (Low to High)

Aggressive Upselling (Morning rush). Attach bakery or packaged chocolate to the guaranteed coffee orders.	**Protect & Optimize** (Morning rush, core coffees). Focus on speed of service and raw ingredient supply.
The Danger Zone Risk of inventory spoilage.	**Traffic Generation** (Evening lulls). The AOV is there; we just need bodies in the door.

X-Axis

Product Conversion (Secondary Items vs Hero Items)

Strategic Directives for Q3

KPI Ticker: Daily Revenue: R 494,092 | Total Orders: 1,285 | AOV: R 384.50

Marketing (Addressing the Evening Gap)

1. Headline

Launch targeted “slow-slot campaigns” focused on the 4 PM - 7 PM window.

2. Headline

Since evening AOV is already high, focus promotions on group visits rather than discounting single items (e.g., ‘Bring a friend’ rather than ‘50% off’).

Inventory Optimization (Addressing Product Imbalance)

1. Headline

Increase automated safety stock levels for the Top 5 Hero SKUs.

2. Headline

Execute targeted promotions on underperforming products (Branded Goods, Packaged Chocolate) to clear capital, or bundle them with Morning Hero SKUs.

Future-Proofing the Business: Next Steps

1 (Immediate)

Automated Reporting

Transition our Databricks/Power BI pipeline into a daily, zero-touch automated dashboard for individual store managers.

2 (Mid-Term)

Time-Slot Loyalty

Implement a loyalty program specifically calibrated to reward visits during non-peak (afternoon/evening) hours, directly attacking the volume gap.

3 (Long-Term)

Multi-Location Scaling

Replicate this exact data architecture to seamlessly ingest and track performance as the company opens new locations beyond the current three boroughs.
